

Think Safety: It's Everyone's Job

Be respectful when addressing the safety concern

Be considerate of interrupting lab work

Use a calm, clear voice

Make sure you can articulate the exact problem before intervening

- Be able to articulate the issue
- Was there a reason for choosing the more unsafe option?
- Offer alternatives

<https://clipground.com/safety-test-clipart.html>

Only recruit others if you cannot address the issue on your own

- Reporting to your advisor may escalate the issue
- Know if the safety issue is low or high risk
 - Low risk: No gloves, no lab coat
 - High risk: No safety goggles, safety protocol not being used
